# EMBRAPA and Agriculture Agri-Food Canada (AAFC) Cooperation

Alexandre C. Varella  
Coordinator of EMBRAPA Labex USA-Canada

1<sup>st</sup> Brazil-Canada Agriculture Forum  
The ecosystem for Brazilian and Canadian Ag-Techs

# EMBRAPA- Mission

*Provide research, development, and innovation solutions for the sustainability of agriculture and for the benefit of Brazilian society*

# EMBRAPA- A Robust Research and Innovation

- **Employees: 8,200**
- **Total Scientists: 2,200**
  
- **43 Research Centers**
  - 11 National Thematic Centers
  - 15 National Product Centers
  - 17 Ecorregional/Agroforestry Centers
  
- **34 Portfolios of projects**
  
- **78 breeding programs**
  
- **Scientific Cooperation- Labex US - Canada and Europe**
  
- **Technical Cooperation - Africa and Latin America**

# EMBRAPA - International Cooperation

## ✓ Platforms

### ➤ Scientific Cooperation

- *North America, Europe and Asia*

### ➤ Technical Cooperation

- *Africa and Latin America*

## ✓ Projects

**88** ongoing projects

**27** partner countries

**62** foreign partner institutions

# National Portfolios

Irrigated  
Agriculture

Nutrition, Safety  
and Health

Amazon

Aquaculture

Automation,  
Precision and  
Digital Farming

Biotechnology  
Applied to  
Agribusiness

Coffee

Meat

Managing Drought  
in the Semiarid

Diversification and  
Market Niches

Energy, Chemistry  
and Biomass Tech

Fibers and biomass  
for industrial use

Forestry

Temperate Fruit

Tropical fruit

Grains

Vegetables

# National Portfolios

Organizational Innovation

Social Innovation in Agriculture

Biological Inputs

Livestock Crop and Forest Integration

Intelligence, Management and Territorial Monitoring

Milk

Rational Management of Pesticides

Climate changes

Nanotechnology

Agriculture Nutrients

Pastures

Genetic Resources

Animal Health

Vegetable Health

Environmental services

Ecologically Based Production Systems

Soils of Brazil

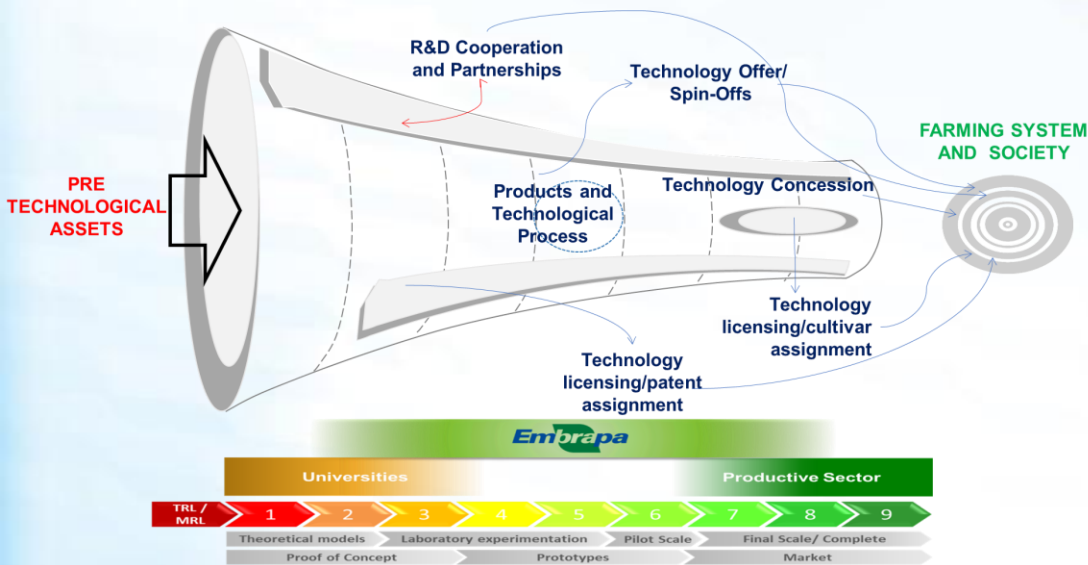

# EMBRAPA- Open-innovation with the Productive Sector

- ✓ Projects in private-public partnerships
- ✓ Innovation-driven projects
- ✓ Co-funding
- ✓ Sharing of Intellectual Property rights

# EMBRAPA-Technological Assets

## Technological assets

✓ **Cultivars**

✓ **Animal lineages and races**

✓ **Agricultural Inputs**

✓ **Industrial Processes**

✓ **Agricultural Processes**

✓ **Machines and equipments**

✓ **Softwares**

✓ **Cartographic assets**

**TECHNOLOGY READINESS MONITORING**

# EMBRAPA- Agriculture Agri-Food Canada Agreement

MEMORANDUM OF UNDERSTANDING BETWEEN  
AGRICULTURE AND AGRI-FOOD CANADA  
AND THE BRAZILIAN AGRICULTURAL RESEARCH CORPORATION  
CONCERNING COOPERATION IN SCIENCE AND TECHNOLOGY

AGRICULTURE AND AGRI-FOOD CANADA (AAFC) AND THE BRAZILIAN AGRICULTURAL RESEARCH CORPORATION (EMBRAPA), hereinafter referred to as the "Participants",

WISHING to foster effective mutual cooperation and exchange in the areas of agricultural education and research,

HAVE COME to the following understanding:

1. OBJECTIVE

The objective of this Memorandum of Understanding (MOU) is to establish a framework for future cooperation of the Participants in science and technology through joint activities in the fields of agriculture and agri-food in order to broaden their existing knowledge in sustainable agricultural development and institutional strengthening for the mutual benefit of Canada and Brazil.

2. AREAS OF COOPERATION

The Participants may cooperate in the following areas:

- (i) Natural resources, climate change such as soil microbiology, nitrogen application effects, and carbon sequestration;
- (ii) Emerging scientific fields such as biotechnology, big data, digital and precision agriculture;
- (iii) Agricultural sector and agricultural competitiveness such as cereals and pulse crops, oilseeds, horticulture, forages, beef, dairy, pork and poultry chains;
- (iv) Increase of food safety and nutrition such as new agri-food products, processes and bioproducts;
- (v) Enhancement of environmental performance of agriculture and livestock systems and agri-food chains;

Agriculture and  
Agri-Food Canada

# EMBRAPA- Agriculture Agri-Food Canada Agreement

Agriculture and  
Agri-Food Canada

- ✓ **MoU signed in July 2020. Valid for a period of 5 years.**
- ✓ **Expansion of Labex Program to Canada**
  - **Biotechnology applied to agriculture**
  - **Digital Agriculture and automation**
  - **Genetics on wheat and pulse crops**
  - **Climate change adaptation and resilience**

Work plans and  
proposals waiting  
for financial  
support

# Gene Editing Applied to Agriculture

- To identify broad spectrum of **disease resistance targets** to apply in multiple crops and pathogens such as **grape and wheat**
- To cooperate and collaborate on projects aiming to **improve N fixation and/or N uptake efficiency** in legumes such as common bean and alfalfa
- Further research progress on the **enhancement of seed protein content** in legumes such as soybean

# Precision Agriculture and Artificial Intelligence

Create **deep learning datasets** and models for apple yield detection and robotics

Promote the **use of RADARSAT Constellation Mission (RCM) and SENTINEL satellite** on crop classification with data from Brazil and Canada

Develop data sharing protocols, **integrate disease data**, **design disease risk mapping**, **biovigilance platforms**

Problems with **big data**, **develop ICASA data standard protocols** to ensure compliance with international data sharing in Precision Agriculture

# Climate Change Research

**Impact of N inputs into Conservation cropping systems with cover crops & crop rotations:** microbiome, GHG monitoring, N balance, crop performance, calibration and validation of simulation models for scenario analyses and scaling-up emission data

**Impacts of Soil Conservation Practices on Soil Carbon Sequestration:** sequestering of CO<sub>2</sub> from the atmosphere and promote soil C accumulation and stabilization; Understanding the impact of different crop/pasture residues on soil organic C accumulation; Evaluate the overall GHG balance of conservation practices (C sequestration vs GHG emissions)

# Germplasm Enhancement & Genetics

Exchange between Canada and Brazil of more recently developed **wheat and beans germplasm**

Testing of Canadian germplasm for **resistance to Wheat Blast** caused by *Magnaporthe oryzae* pathotype *triticum* (MoT)

bacterial blight, root rot **resistance and early maturing germplasm on dry bean**

**Bio-fortification** evaluations of wheat germplasm
